

April 16, 2020

Trusted Shipbuilding Partners,

In connection with the [Center for Disease Control](#) (CDC) guidance, and in an effort to reduce the potential spread of COVID-19, persons entering NNS property are now required to bring a face covering and to wear the covering while within 6 feet of others. These requirements apply to any personnel entering the facility, including suppliers and subcontractors.

Individuals using face coverings at NNS must do so under the following guidelines:

- Must be removed so that your face can be seen at all access points (areas where you are required to scan your badge)
- Must be removed when requested by Security for identity verification
- Must be tight to the face with no loose edges when working around rotating equipment
- Cannot be worn with NNS-approved respirators
- Cannot be worn as a substitute for NNS-approved respirators
- Cannot be worn when performing hot work
- Must be disposed of properly in trash receptacles
- Face cloths are an additive protection – continue to practice social distancing

Please visit the CDC website for further guidance on usage of face coverings using the link provided above. Additional information relating to NNS communications regarding COVID-19 may also be accessed through the [NNS Supplier website](#).

Thank you for your continued partnership through these unprecedented times.
